

# Arrays

# Array

- An **array** is a special type of variable that can hold multiple values of the **same data type** simultaneously.
- An array is an object that stores the collection of values
- One variable is used to store multiple items of same type and same variable is used to modify the items

names

# Declaring arrays

➤ There are 2 ways to declare one-dimensional Arrays:

1. Specify the type(primitive or object), and then specify square brackets[] and finally the array variable name.

```
int[] scores;  
String[] names;  
Student[] students;
```

2. Specify the type(primitive or object), and then specify the array variable name which is followed by square brackets []

```
int scores[];  
String names[];  
Student students[];
```

# Instantiating arrays

➤ To instantiate one dimensional array, use the keyword `new`, followed by type and then finally specify the size within square brackets[]

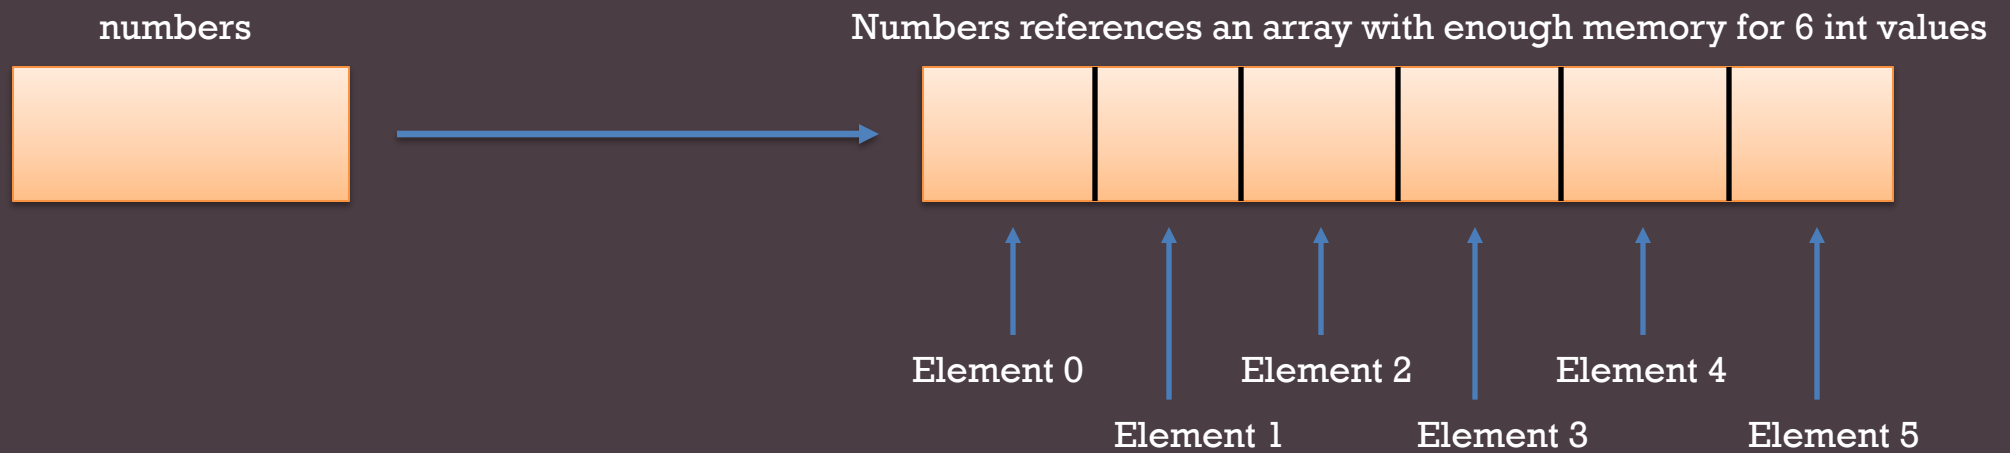

## 1. Declare and instantiate in separate statements

```
int[] scores;  
scores = new int[4];
```

```
String[] names;  
names = new String[5];
```

## 2. Declare and instantiate in single statement.

```
int[] scores = new int[4];  
String[] names = new String[5];
```

# Accessing Array Elements

You can access elements of an array by using the square brackets `[]`. The first element of the array starts with **0**, the second element starts with 1, and so on.

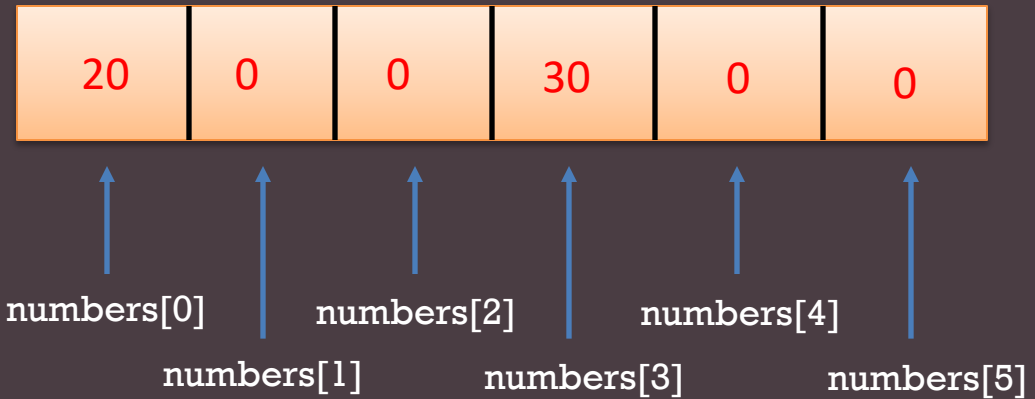

# Assigning values to Array Elements

```
numbers[0] = 20;
```

arrayRefVar      index      value

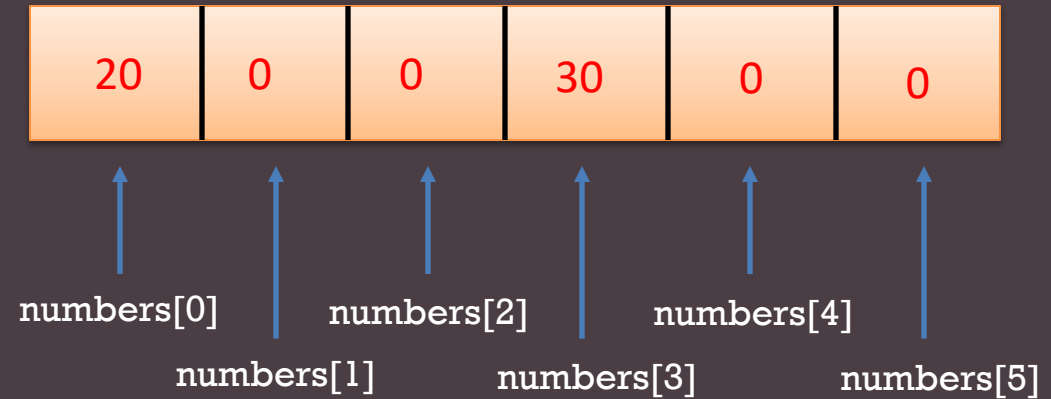

```
numbers[3] = 30;
```

## Reading values from Array Elements

```
System.out.println(numbers[0]); //20  
System.out.println(numbers[1]); //0  
System.out.println(numbers[2]); //0  
System.out.println(numbers[3]); //30  
System.out.println(numbers[4]); //0  
System.out.println(numbers[5]); //0
```

# Task

Create an array that holds 12 months names

User should be able to enter month index and output should be:

“The month name is <MonthName>”

# Task

Create an array that holds the days

User should be able to enter the day index and output should be:

“Today is Monday”
